

CSIR's Letter of Support

After conversations with various senior members in the Mechatronics group at the CSIR the following conclusions have been made.

Dawid Oosthuizen will be appointed as the mentor to help assist with the technical direction as well as the content and layout of the project.

Time allocation of one day per week will be allocated to Angus Steele for his master's project. This will remain so for the duration of the research sections and can be revaluated further down the line.

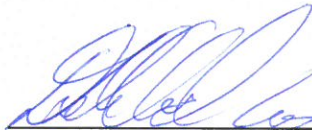

Funding allocations will be available for the project but must be kept within reason. Travel costs to and from Stellenbosch will be the responsibility of the student, with the CSIR covering one visit per annum.
